

School Garden

Landscape Design

The aim of this project is to create a thoughtfully designed outdoor landscape that provides opportunities for children at the nursery to manipulate, play, and learn. Using the theories of woodland classrooms, a multifunctional space was designed to offer enjoyment and challenges whilst encouraging the children to imaginatively shape their environment and embrace seasonal changes.

Carefully considered planting will be incorporated into the design which provides excitement, and performs an educational role, as well as promote wildlife and biodiversity.

All materials specified for the installation will be sustainably sourced.
